

## Day 2 – Awesome mister-toy

Use Community components and libraries.

Let's use some community components and libraries:

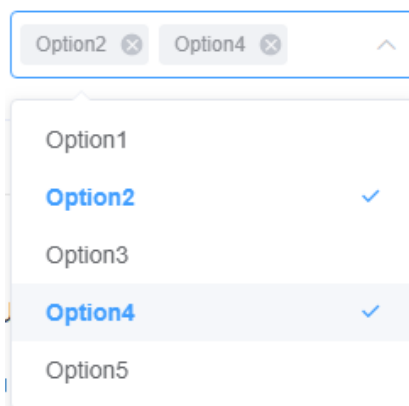

### Vue-chartjs

- Add a dashboard page with charts:
  - Prices per toy type (Adult, Educational etc.)
  - Inventory by type – Chart showing the percentage of toys that are in stock by type.

### ElementUI

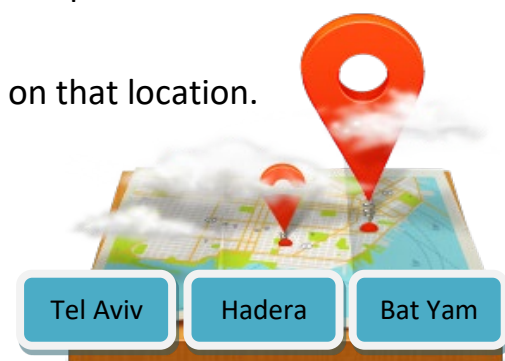

- Use various components from [elementUI](#)
  - Example: in your toyFilter use a *select* component

- Validate your inputs using [vee-validate](#) (Make sure to use v3.x documentations)

- In the About page, use [vue-maps](#) to show markers for the shop branches.
- Each branch will appear as marker on the map.
- When user clicks a branch button the map is centered on that location.

## Bonus

Use [vue-i18n](#) and make your app internationalized.

Allow the user to switch between the locales.
