

Advanced Vue

Add Stuff to misterToy

Props Validation

Add props validations to your components.

Slots

Nice Popup

Build a nice-popup component

- Esc key should close the popup ([remember?](#))
- The popup should have 3 slots: *header*, *footer* and a default slot for the *main* content
- Add a chat icon at the bottom right of the page that opens your popup:
 - Inside the popup, render the **chat-app** component.
 - For now it just allow the user to send some text that appear in a list of msgs, and anything the user says is auto responded after a short delay:

Ya: Is there anyone here?

Support: Sure thing honey

Ya: I need to buy a toy

Support: Sure thing honey

Send

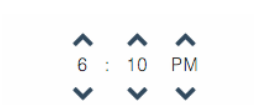

Custom Controls

Build the following custom controls (support v-model) and use them inside a `<form>` for editing the user-profile (gender, reminderTime and favColor).

- Build a component: **gender-picker** that allows: Male, Female, I'd rather not say

- Build a component: **time-picker**

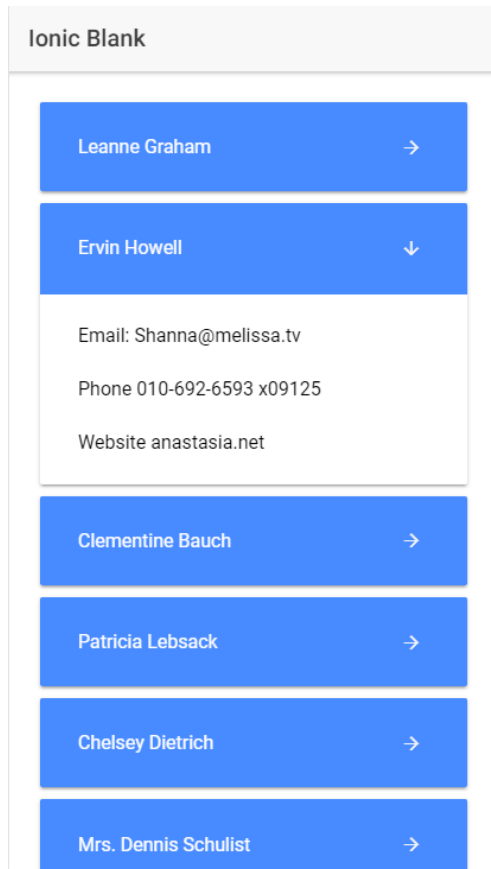

- Build a component: **color-picker**

Select a color:

BONUS - Accordions

Build an accordion component – only one accordion should be opened at a time.

Build a `<accordion-item>` and a `<accordion-group>` components:

```
<accordion-group>
  <accordion-item title="The Team">
    <h2>Our team is Here</h2>
  </accordion-item>
  <accordion-item title="About Us">
    <h2>We are Great</h2>
  </accordion-item>
</accordion-group>
```

- Inside `<accordion-item>`
 - Use `this.$parent` to call a method `toggleAccordion` on the `<accordion-group>` when clicked
 - Use `<slot>` to get content to show when accordion is open
- Inside `<accordion-group>`

- In the method `toggleAccordion`, use `this.$children` to close all accordions (you may access the `accordion-item` data!)
 - Add a single `<slot>` that will render all of the content
- Add sliding animation
